Java

```java
class Solution {
    public int countSeniors(String[] details) {

    }
}
```

JavaScript

```javascript
/**
 * @param {string[]} details
 * @return {number}
 */
var countSeniors = function(details) {

};
```

TypeScript

```typescript
function countSeniors(details: string[]): number {

};
```

C++

```cpp
class Solution {
public:
```

```cpp
    int countSeniors(vector<string>& details) {

    }
};
```

C#

```csharp
public class Solution {
    public int CountSeniors(string[] details) {

    }
}
```

Kotlin

```kotlin
class Solution {
    fun countSeniors(details: Array<String>): Int {

    }
}
```

Go

```go
func countSeniors(details []string) int {

}
```
